PART V - SOIL PROFILE DESCRIPTION

Soil boring(s) are to be located adjacent to the soil absorption system (SAS) and must extend at least three (3) feet below the infiltrative surface. A minimum of one (1) soil boring must be evaluated for systems with no soil test report on file or when the County determines an existing test to be obsolete. Note, this is not a complete soil evaluation. This evaluation may not comply with the standards found in s. Comm 85.20(2), Wis. Adm. Code, and is not intended to be used to delineate a site within which a new or replacement SAS can be installed. This evaluation is only for the purpose of allowing the regulatory authority to determine if the existing SAS is located in code compliant soils.
